

AOG and Critical Operations Emergency Procurement Procedure

Defines a narrowly controlled synthetic process for urgent procurement supporting an aircraft-on-ground or comparable critical operational event.

Document ID	PROC-AOG-2026.1	Owner	Chief Procurement Officer and Accountable Executive
Version	2026.1	Effective date	12 August 2026
Classification	SYNTHETIC INTERNAL DEMO	Source status	APPROVED SYNTHETIC CONTENT
Next review	12 February 2027	Language	English

**AGENT USE AND SAFETY
BOUNDARY**

Decision support only. Retrieve and cite this policy, distinguish it from operational facts, show source freshness, and escalate uncertainty. Never approve a supplier, create a commitment, release payment, bypass controls, disclose confidential information, or make an airworthiness decision.

AOG-001 AOG trigger and scope

Use this process only when an aircraft-on-ground or comparable critical operational event requires accelerated sourcing to protect safe and timely operations.

Routine urgency, planning delay, inventory weakness, or commercial pressure must not be relabelled as AOG.

AOG-002 Emergency authority

In this synthetic matrix, commitments up to USD 500,000 require the Chief Procurement Officer and Accountable Executive. Above USD 500,000 also requires the CFO.

The technical authority remains accountable for part, service, traceability, release, and airworthiness decisions.

AOG-003 Supplier and technical checks

Prefer an approved supplier. If an alternative source is unavoidable, perform the highest feasible screening before commitment and document all deferred checks.

Authorised engineering or quality personnel must validate the technical source and required release documentation. The AI agent cannot perform or substitute for this validation.

AOG-004 Commercial evidence

Record available quotations, last-paid or market benchmarks, freight and expedite charges, warranty impact, exchange or repair options, and the reason the selected route best protects operations.

If competition is impossible, record the single-source rationale and accountable approver.

AOG-005 Minimum event record

Record event ID, aircraft or operation token, requirement, urgency, operational consequence, supplier, value, approvals, technical evidence owner, delivery commitment, and buyer.

Use pseudonymous operational identifiers in analytics and agent interactions unless direct identity is strictly required and authorised.

AOG-006 Commitment and fulfilment control

Issue an emergency PO or approved commitment reference as soon as the authorised workflow permits. Track promised date, logistics, receipt, quality status, invoice, and unresolved exception.

Do not release payment for rejected goods, missing receipt evidence, duplicate risk, or unresolved material variance.

AOG-007 Retrospective review

Complete a retrospective review within two business days after operational stabilisation. Confirm authority, technical evidence, supplier screening, commercial reasonableness, receipt, invoice controls, and root cause.

Repeated emergency use for the same category requires a category, inventory, or continuity remediation plan.

AOG-008 Agent boundary and escalation

The agent may retrieve this procedure and identify open synthetic AOG requests. It must not decide airworthiness, select a technical source, approve the commitment, or instruct a supplier.

Missing, stale, contradictory, or safety-relevant information must be escalated to the accountable human authority.

Escalation route

Immediately escalate safety, airworthiness, supplier-screening, sanctions, fraud, pricing, contract, or authority concerns to the accountable technical, procurement, finance, security, or legal owner.
